Internet Mail Logon

Account name is your <u>full</u> email address. If you have forgotten your password please contact support.

Click Next.

Click Finish. Wait, we are not done yet!

You will return to the Internet Accounts screen. Select the account you have just created and **click Properties**.

In the Properties window, name your Mail Account - you can write anything here, this just identifies the name of the account on your computer. You can use your email address for easy identification.

Click Apply then click the Servers tab.

Under the Servers tab

Fill in the checkbox next to "My server requires authentication". Settings button > Use the same settings as my incoming mail server.

Click Apply then click the **Advanced** tab.

Under the **Advanced** tab Change the Server Port Number for the Outgoing server (SMTP) to: 587

Click OK.

Click Close to close the Internet Accounts windows. You should now be able to send and receive email.
